-----

The implementation of the photovoltaic poverty alleviation (PVPA) policy has generated substantial short-term and long-term job opportunities in key poverty-stricken counties, spanning the planning, ...

Researchers from the University of Zurich and Wuhan University have assessed how solar energy resources affect social and economic development ...

To address this problem, we take China's Photovoltaic Poverty Alleviation Project (PPAP) as an example to empirically study the benefits of large-scale PV deployment for alleviating ...

This study evaluates the emission reduction and welfare effects of distributed photovoltaic construction using a difference-in-differences model as a quasi-natural experiment, ...

By employing a difference-in-differences strategy, we find that the community-based PVPA stations distributed in China are anti-poverty facilities that can reconcile equity and efficiency.

Quantifying the potential triple benefits of photovoltaic energy development in reducing emissions, restoring ecological resource, and alleviating poverty in China.

The new comprehensive guidelines aim to accelerate the transition from traditional fossil fuel-based power generation to cleaner, more reliable, and affordable solar ...

By the end of 2019, in China, the task of PPAP construction had been fully completed, with 26.36 million kWh of (PV) photovoltaic power plants having been built and 4.15 million households benefitting. This ...

To synergize climate mitigation with poverty alleviation, China has implemented photovoltaic poverty alleviation (PVPA) projects since 2014, with Anhui Province being among the initial pilot regions.
