---

To enhance the utilization of base station energy storage (BSES), this paper proposes a co-regulation method for distribution network (DN) voltage control, ...

With the innovation of energy harvesting (EH) technology and energy storage technology, renewable energy with energy storage batteries provides a new way to power

In the communication power supply field, base station interruptions may occur due to sudden natural disasters or unstable power supplies. This ...

Therefore, this paper proposes a two-stage robust optimization (TSRO) model for 5G base stations, considering the scheduling potential of backup energy storage. At the day-ahead ...

Specifically, we analyze herein the optimality, feasibility, and computational aspects of six different (commonly used) battery optimization approaches from literature: four optimization formulations and ...

Therefore, this paper uses the charge and discharge control of energy storage batteries, combined with wind and solar resources and time-of-use electricity prices, to achieve "peak shaving ...

To maximize overall benefits for the investors and operators of base station energy storage, we proposed a bi-level optimization model for the operation of the energy ...

To address this issue, we propose BatPro, a battery pro-filing framework, to precisely predict base station battery group working conditions by extracting the features that cause the working condition ...

To maximize overall benefits for the investors and operators of base station energy storage, we proposed a bi-level optimization model for the operation of the energy storage, and the ...
