The materials database provides a comprehensive compilation of the type, quantity, country of origin, source, significant uses, projected availability, and physical properties of materials ...

The Global Wind Atlas is a free, web-based application developed to help policymakers, planners, and investors identify high-wind areas for wind power generation virtually anywhere in the world, and then ...

Class 4 and 5 wind power is estimated for the central and northern Marshalls, while class 3 wind power is estimated for the Northern Marianas and the ocean area around Guam.

The United States Wind Turbine Database (USWTDB) provides the locations of land-based and offshore wind turbines in the United States, corresponding wind project information, and turbine technical ...

It contains data about wind farms, turbines, manufacturers, developers, operators, owners and also pictures and cartographical data.

Maximum base station power is limited to 38 dBm output power for Medium-Range base stations, 24 dBm output power for Local Area base stations, and to 20 dBm for Home base stations.

Small wind turbines that can power a single home may have an electric-generating capacity of 10 kilowatts (kW). The largest operating wind turbines have electric-generating capacity of about 15,000 ...

Modern wind turbines are categorized by where they are installed, and how they are connected to the grid.

Non-dispatchable plants include such sources as wind and solar energy; while their long-term contribution to system energy supply is predictable, on a short-term ...
