Developed by the World Bank Group and produced by Solargis, it maps solar irradiation and photovoltaic power potential for every location on Earth based on over two decades of satellite ...

The Global Solar Atlas provides a summary of solar power potential and solar resources globally.

Malaysia's photovoltaic power potential map obtained from the Global Solar Atlas 2.0, a free, web-based application that is developed and operated by the company Solargis s.r.o. on behalf of the ...

This free, web-based tool will help investors and policymakers identify potential sites for solar power generation virtually anywhere in the world, ...

The goal of the atlas is to expose solar resource and photovoltaic power potential data.</p><p>The PV Power Potential variable represents the estimated annual electrical energy ...

It includes corresponding PV facility information, including panel type, site type, and initial year of operation.

Free and open access to photovoltaic (PV) electricity generation potential for different technologies and configurations. Available in English, French, Italian, ...

The Global Solar Atlas is provided by the Energy Sector Management Assistance Program (ESMAP), a multi-donor trust funded program administered by the World Bank, and was developed under contract by Solargis, a provider of solar resource data and photovoltaic (PV) energy evaluation services. The GSA provides an interactive map of solar resource and photovoltaic power potential and a variety of other environmental data relevant for understanding the practical and technical potential of solar powe...

Global map showing practical solar energy potential after excluding for physical, environmental and other factors. The potential for clean, carbon-free electricity ...
