-----

It can absorb energy to cover the daily consumption of 1,300 households and at the same time contributes to stabilising the grid and ensuring the required electricity parameters. Thanks to its ...

Testing services for battery cells, modules and entire systems, from small hybrids to full electric cars. The battery is the key component of the electric vehicle.

All these aspects of the battery chain as perceived by the CBK present opportunities for research, applied research, manufacturing, but also trade and downstream services.

In the heart of Europe, Prague is emerging as a critical hub for energy storage innovation. This article explores how lithium battery factories in Prague are reshaping renewable energy systems, industrial ...

The participants will learn about Lithium-ion battery testing, performance and degradation behaviour, as well as about their modelling. The last day will focus on aspects of state-of-health estimation, which ...

The Battery Tech Expo - Prague is perfectly located to showcase the Battery Technology supply chain in the Central Europe Hub - Highlighting the Czech ...

The participants will learn about Lithium-ion battery testing, performance and degradation behaviour, as well as about their modelling. The last day will focus ...

With a well-established and innovative automotive industry, and a growing number of gigafactories both in operation and planned, the next few years will see a rapid expansion in battery production capacity ...

With the growing share of renewable energy and the rapidly decreasing costs of battery storage technologies, the Czech Republic is experiencing a new energy boom.
