-----

However, Latvia has strong potential in developing high value-added solutions -- including advanced materials research, battery management systems (BMS), charging technologies, safety ...

Although Latvia cannot compete with global leaders in large-scale manufacturing capacity, it has strong potential in innovative, sustainable, and knowledge-driven battery materials and ...

The company trades flexible assets in Lithuania, Latvia, Finland, and Sweden and is now expanding its operations across Europe. It currently operates over 200 MW of BESS capacity and ...

At the forefront of this revolution is our new battery manufacturing plant in Riga, Latvia. With a production capacity of 100 MWh annually, this facility is set to transform the landscape of energy ...

Slovenian energy system solutions provider NGEN Group announced its entrance into the Latvian market with the acquisition of a 100-MW/200-MWh battery storage project and a EUR-50 ...

On 25 February 2026, the Institute of Solid State Physics, University of Latvia (ISSP UL), hosted the country's first-ever Battery Industry Day, bringing together a broad spectrum of ...

The first BESS projects are being implemented in Latvia and at Latvenergo production sites - starting with the smaller-scale BESS at Latvenergo AS CHPP-1 and continuing with larger ...

The addition of two utility-scale battery energy storage systems (BESS) in Latvia marks the final milestone in synchronizing the Baltic power ...

After Latvia disconnected from the Soviet grid in February 2025, ensuring sufficient flexibility to maintain grid stability became a national priority. Without the Belarus, Russia, Estonia, ...
