Reflecting sunlight can potentially cause glare or glint to flight crew during the approach or take off, resulting in a loss of situational awareness and loss of control.

This article is addressed to aviation safety community and the designers of the PV projects, with the aim of preventing risks and finding a ...

Can planes take off in high winds? The short answer is yes, but depending on the wind speed and on-the-ground conditions, a flight may be delayed or assigned to a different runway.

Solar reflections can impact pilots and cause safety concerns, and locating solar developments on airports can heighten this risk. In this article we ...

We'll explore how flying in storms poses significant challenges. Understanding some behind-the-scenes wind limits in ...

Passengers tend to worry about strong winds during flight, but the reality is that wind speed during cruise flight has little or no effect on a plane. ...

Air traffic and air traffic control services will be better protected from safety risks, and investors in PV systems will have much greater confidence that their installations will co-exist well ...

Photovoltaic (PV) system is an essential part in renewable energy development, which exhibits huge market demand. In comparison with ...

Wind turbines close to airports can be installed after a site-specific risk evaluation and related mitigation measures (if appropriate) indicates neglectable impacts on aviation safety.
