On a wind plateau in Normandy, engineers have unveiled one of the most elegant energy systems ever: a wind turbine without blades. No spinning blades. No gears. No noise. Just a slender ...

This is the idea behind Vortex Bladeless a Spanish startup that has developed an innovative wind turbine without blades, capable of generating ...

Wind power is mostly associated with sweeping white blades, taking advantage of the strong gusts that blow over the land or the sea. But what if we ...

Vortex Bladeless is a new kind of wind turbine -- one that features no blades, just a simple pole that vibrates to generate power. It is made by a Spanish startup, and its design is ...

Wind energy, a fast-growing source of electricity supplies globally, typically comes from large turbines with twirling blades. Some entrepreneurs are trying to ...

Unlike their bladed counterparts, bladeless wind turbines don't have the familiar spinning rotors. Instead, they have a tall, thin profile and oscillate in ...

Dutch researchers have created a bladeless wind turbine with no moving parts that produces electricity using charged water droplets.

Curious about how wind turbines work when there's no wind? This article explains how turbines generate electricity, even when it's not windy outside!

Turbine blades are connected by a shaft to a generator, which produces electricity as the blades turn. Motors help increase the velocity of the blades, generating more electricity while keeping ...
