The idea of space-based solar power dates back to as early as 1923 when Russian theorist Konstantin Tsiolkovsky proposed using mirrors in space ...

RD2 uses flat panels, with solar cells facing away from Earth and microwave emitters facing toward the Earth. RD2 generates power 60% of the year due to its limited capability to reposition itself or redirect ...

As a prototype prepares for tests in orbit, Nature looks at five of the biggest challenges for space-based solar power.

Harvesting solar energy in orbit and beaming it down to Earth is a decades-old idea. Now, a raft of companies say they could make it a reality.

Through the Space-based Solar Power Project (SSPP), a team of California Institute of Technology (Caltech) researchers is working to deploy a ...

Space solar power stations could beam collected energy to anywhere they can see; the transmitted energy can pass through clouds. The stations could be placed in orbits that provide ...
