The project will support 150 local jobs in the emerging clean energy sector. Battery storage technology is a key component of the ACT's net-zero emissions future.

It can meet the company's application needs such as peak shaving, dynamic capacity expansion, demand-side response, and virtual power plants, and ...

Think of a cooling system as the "air conditioner" for your energy storage cabinet. Without proper thermal management, batteries overheat, efficiency drops, and lifespan shortens. In 2023, a Stanford ...

The entry into operation of ACT Battery is further evidence of Naturgy's strategic commitment to Australia. The group recently announced the ...

Unlike other cooling methods, our advanced active water cooling technology ensures uniform temperature distribution across battery cells, reducing energy ...

The Big Canberra Battery will play a crucial role in managing peak electricity use demand and in supporting the ACT's transition to a more sustainable energy future.

This whitepaper from Kooltronic explains how closed-loop enclosure cooling can improve the power storage capacities and reliability of today's advanced battery energy storage systems.

The Capital Battery, proposed in south east Canberra, will be a 100 MW stand-alone battery that stores energy and discharges it whenever it's needed.

In a state-of-the-art Liquid Cooling Battery Cabinet, this technology ensures every cell operates within its ideal temperature range, preventing hot spots and maximizing both its lifespan ...
