The 100% solar panelled ATC radar station will help monitor the commercial flights operated daily by the DGAC in the country, providing ...

The station is located in the north of Chile, specifically in the Atacama Desert, more than 3,500 meters above sea level, a region known for ...

Space as a high value asset... Chile has changed its strategy, integrating actors, means and ends, generating a Space Program called SNSAT. This program seeks to develop technologies and ...

Abstract This paper aims to consolidate the work carried out in making base station (BS) green and energy efficient by integrating renewable energy sources (RES). Clean and green ...

Chile's General Directorate of Civil Aeronautics (DGAC) and Thales have partnered to launch the world's first completely solar-powered air traffic control radar station.

This study covers the basic understanding of solar power in terms of construction, types along with a clear indication of solar power as one of the promising renewable energy options.

Thales, a global technology leader, is advancing air traffic surveillance and safety in Chile with a revolutionary new radar station 100% powered by sustainable solar energy.

In this paper we assess the benefits of adopting renewable energy resources to make telecommunications network greener and cost-efficient, ...

Swedish Space Corporation (SSC) installed a solar panel park at its satellite station facility in Santiago, Chile. The company has a goal to reach zero carbon dioxide emissions by 2040, and the ...
