China is racing to develop a new generation of wind farms that can not only survive tropical cyclones, but also harness their power.

China has unveiled the world's most powerful direct-drive floating wind turbine, marking a major leap in renewable energy innovation. The 17 ...

China has more wind power than any country in the world and is currently adding twice as much as the rest of the world combined.

BEIJING -- China's farthest offshore wind power project has achieved its first grid connection, marking a significant step forward in the country's deep-sea renewable energy ...

China Just Launched a Massive Floating Wind Turbine That Floats 6,000 Feet in the Air A massive helium blimp generates megawatt-scale power from high-altitude winds above the clouds.

Off the coast of southern China, a giant, double-headed turbine rises out from among its conventional counterparts, held up by a spiderweb of ...

The airship, known as the "power station in the sky", uses a helium-filled balloon to lift a lightweight generator and harness wind energy at high ...

Wind power could soon come from the sky as China has successfully tested a megawatt-class airborne turbine that generates electricity while hovering 2000 metres up.

Offshore turbines are mostly found in nearshore areas with uniform distribution. This wind turbine map provides essential information for predicting wind power production, optimizing wind ...
