Chuanxindian, a small village in Central China's Hubei province, was the first participant when Zigui county launched a new energy project that aims ...

China's rural "solar villages" show how distributed renewables can boost incomes and local infrastructure - even as grid constraints and fading subsidies test the model's long-term viability.

Bathed in radiant sunlight, the rooftops of Dongshan Village on the Qinghai-Tibet Plateau gleam with solar panels that are helping transform local ...

China's largest single solar power project built on former coal mining subsidence land has begun operation in Lingwu, Ningxia Hui Autonomous Region. The 4-gigawatt photovoltaic plant ...

Their voracious appetite, once a headache for environmentalists, has now become essential for maintaining the smooth operation of the solar power station. In 2012, the prefecture ...

It was back in 2014 that China had started encouraging villages to try "distributed solar" - where power is produced near where it will be consumed. Both the prospects of those villages and ...

A large part of the solar power capacity installed in China is in the form of large PV power plants in the west of the country, an area much less populated than the ...

Xinjiang is sparsely populated and abundant in solar and wind resources. This makes it an ideal site for massive renewable energy bases that ...

China is building an enormous network of clean energy industries on the Tibetan Plateau, the world's highest. The intention is to harness the region's ...
