-----

Even as China's expansion of solar and wind power raced ahead in 2025, the Asian giant opened many more coal power plants than it had in recent years - raising concern about whether the...

China aims to peak carbon emissions by 2030 and reach carbon neutrality by 2060. To support these goals, the government committed to ...

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

China is leading this surge by a wide margin. In the first half of 2025, the country installed more than twice as much solar capacity as the rest of the ...

By the first quarter of 2024, China's total utility-scale solar and wind capacity reached 758 GW, though data from China Electricity Council put the ...

(Yicai) Dec. 16 -- China will add more than 200 million kilowatts of new wind and photovoltaic power generation capacity next year as it accelerates the green ...

China is building an enormous network of clean energy industries on the Tibetan Plateau, the world's highest. The intention is to harness the region's ...

China actually added record amounts of both wind and solar power capacity in 2025. And according to some calculations, it may even have reached peak CO2 emissions -- way ahead of its ...

China is using more power every year and coal was still responsible for generating 58% of that in 2024 - although the rapid growth of wind and solar power means they were contributing 18%.
