LFP batteries are significantly reducing the demand for cobalt and nickel in the EV industry. Unlike NMC batteries, LFP batteries do not rely on ...

Automakers like Tesla are transitioning to cobalt-free batteries to address ethical concerns tied to cobalt mining (e.g., child labor) and reduce environmental harm. These batteries, such as lithium iron ...

Tesla and other automakers like China's BYD have turned to the LFP battery, which was developed in America in the '90s but ...

Tesla has been at the forefront of adopting cobalt-free battery technology. As of early 2022, nearly half of all Tesla vehicles produced were equipped with lithium iron phosphate (LFP) ...

For years, Tesla has deployed two main types of batteries across its global lineup: nickel-based chemistries such as nickel-cobalt-aluminum (NCA) and nickel-manganese-cobalt (NMC), and ...

Tesla has been planning a strategy with batteries free of "complicated" raw materials, such as nickel or cobalt, for years now. In that ...

Among its breakthroughs is the adoption of LFP (Lithium Iron Phosphate) battery technology in specific models, providing an alternative to its ...

Tesla has been working on cobalt-free battery alternatives for years. One promising option is the lithium iron phosphate (LFP) battery, already used ...

Tesla confirmed that nearly half of all its vehicles produced last quarter are already using cobalt-free iron-phosphate (LFP) batteries. The information also gives us an interesting insight into Tesla's mix ...
