A jammer will loop back to the beginning instead of completing the handshake. This method jams the receiver in an infinite loop where it keeps trying to initiate a connection but never completes it, which ...

The jammer may be either a ground jammer (stationary) or an air jammer (moving). The choices of number of nodes and jammer type are made at the time of scenario creation and cannot be changed ...

A cell phone Signal jammer is an electronic device that blocks the transmission of signals between a cell phone and a base station. By using the ...

The post describes a simple homemade RF signal jammer circuit that can be used for jamming any RF signal within a radial range of 10 meters. ...

Consequently, dealing with super-reactive jammers is very challenging. Thus, we introduce a smart deception mechanism to attract the jammer to continuously attack the channel and ...

A cell phone jammer is a small equipment that is capable of blocking the transmission of signals between cell phones and base stations. This is mostly ...

Although the circuit is a sensor, it has the ability to transmit with the cellphone base station. Once the device senses the presence of a cell signal in a "silent" zone, the control software in the base station ...

This project highlights the design of a simple, low-cost mobile-phone- jammer and aims to present a solution for the problem of inappropriate-use of ...

Jammers work by giving a RF signal or a signal at the same frequency expected by the device that's being jammed, but at a higher power compared to the targeted signal. The jamming signal itself is ...
