Visitors typically spend about two hours exploring the museum, which features creative presentations and cut-away sections of original equipment. The ...

This is a tour that takes in various parts of the old Central Tejo, a thermoelectric power station built in 1908 that supplied the entire Lisbon region with electricity.

Museu da Eletricidade is housed within the perimeter of the former Central Tejo, a thermal power plant that provided electricity to Lisbon and its region for over four decades. The building itself is an ...

The entire complex of the Central Tejo (The Tejo Power Station) consists of a former thermo-electric power plant, which supplied power to Lisbon and its surroundings.

One of the exhibits is the Tejo Power Station, a power plant factory converted into a museum reviewing the history of electricity in Portugal.

Younger visitors enjoy seeing the historic power plant's original machinery and learning how it once supplied electricity to Lisbon. The museum also offers specialized tours for kids ...

This is a superb example of industrial architecture from the early 20th century, which tells us what it was like to spend a day in the ...

This museum is housed in a group of buildings classified as national heritage - the Central Tejo or Lisbon power station. Besides the building itself, the main ...

The Tejo Power Station, previously known as the Junqueira Power Station, was a small electricity factory. It was built in 1909 and based on a project by engineer Lucien Neu, with architectural execution carried out by Charles Vieillard and Fernand Touzet. The building had a modernist aesthetic and ornamentation on its north and south facades. On the building's western side, three industrial naves housed the boilers. The defining
