Lawrence Berkeley National Laboratory compiled and synthesized empirical data on the U.S. utility-scale solar sector.

A comparison of the solar power status among countries and territories has been provided, considering their concentrated solar power and PV installed capacities for each continent.

Bifacial modules dominate the market, making up over 75% of production. Utility-scale systems accounted for about 62% of new installations, while distributed ...

According to our Electric Power Annual, solar power accounted for 3% of U.S. electricity generation from all sources in 2020. In our Short-Term ...

According to a U.S. Customs and Border Protection Commodity Status Reports, since the President raised the annual tariff rate quota for cells to ...

Find up-to-date statistics and facts on the global solar photovoltaic industry.

Solar energy can be harnessed two primary ways: photovoltaics (PVs) are semiconductors that generate electricity directly from sunlight, while solar ...

4.4% of our global energy comes from solar power. China generates more solar energy than any other country, with a current capacity of 308.5 GW. ...

In 2024, 40% of new PV was distributed, and 60% was utility scale.
