We design and implement tailored lightning protection systems for data centers, incorporating advanced surge protection devices, grounding systems, and shielding techniques.

Protecting your data center from lightning requires more than just ...

Discover how proper data center lightning protection prevented catastrophic data loss in this detailed case study.

Grounding is the foundation of electrical safety in any data center. Grounding systems protect people, equipment and data. Proper grounding provides a safe path for unwanted electrical energy to flow ...

Our comprehensive lightning protection systems and lightning avoidance systems are engineered specifically to solve lightning risks faced by data center operators, to keep you running through the ...

This guide provides an overview of best practices for energy-efficient data center design which spans the categories of information technology (IT) systems and their environmental conditions, data center ...

Data center physical infrastructure encompasses the essential systems--power, cooling, racks, cabling, lighting, and safety--that support IT hardware and operations. Without a reliable ...

The number of built objects of large data centers (DCs) rapidly increasing. High quality protection of equipment and devices and, above all, the services that the DC provides, becomes ...

This design follows IEC 62305, a global standard for lightning protection, to ensure the data center roof is protected from direct strikes and surges, safeguarding critical electronics.
