PVGIS is a free web application that allows the user to get data on solar radiation and photovoltaic system energy production, in most parts of the world.

Online 3D simulation of the Solar System and night sky in real-time - the Sun, planets, dwarf planets, comets, stars and constellations

For the first time in history, solar and wind energy generated more EU electricity than fossil fuels in 2025, together responsible for a record 30% of EU power ahead of fossil fuels" 29%.

Europa may be one of the most promising places in our solar system to find present-day environments suitable for some form of life beyond ...

Solar panels in space could cut Europe's terrestrial renewable energy needs by 80% by 2050, a study has found.

Wind and solar generated more EU electricity than fossil fuels for the first time in 2025, marking a "major milestone" in the transition to clean power.

OverviewDiscovery and namingOrbit and rotationPhysical characteristicsExplorationHabitabilityFutureSee alsoEuropa is the smallest and least massive of Jupiter's four Galilean moons. It is observable from Earth with common binoculars and is a planetary-mass moon, slightly smaller and less massive than Earth's Moon. Europa is an icy moon, and, of the three icy Galilean moons, the closest orbiting Jupiter. As a result, it exhibits a relatively young surface shaped by tidal heating.

Solar remained the EU's fastest growing power source in 2024, rising above coal for the first time. Wind power remained the EU's second largest power source, above gas and below ...
