-----

The European Union has resolved a glaring omission in the design of its Battery Passport, the forthcoming directive on sustainability, labelling and ...

This study not only advances the chemistry of Fe/Eu-based redox flow batteries but also presents a novel pathway for utilizing europium resources in sustainable energy storage.

Flow batteries are emerging as a transformative technology for large-scale energy storage, offering scalability and long-duration storage to address ...

In this Review, we discuss recent progress in the development of flow batteries, highlighting the latest alternative materials and chemistries, which we divide into two categories: ...

With the promise of cheaper, more reliable energy storage, flow batteries are poised to transform the way we power our homes and businesses and usher in a new era of sustainable energy.

Installed EU battery capacity has risen tenfold since 2021 to 77.3 GWh and must continue this tenfold increase to hit 750 GWh by 2030 to meet the needs of the power market, SolarPower ...

To chart the route towards the future third-generation battery technologies for large-scale energy storage, the EU-funded Bi3BoostFlowBat project will develop cost-efficient batteries featuring ...

It's not just one technology and we have exciting news: developers of iron-based systems, soluble lead, manganese and lithium sulphur, and ...

HIGREEW will focus on the Aqueous Organic Redox Flow Battery (AORFB) as EES technology. Read more about this here. As of March 2021, HIGREEW has ...
