OverviewHistoryDesignBattery designs and formatsUsesPerformanceLifespanSafetyOne of the earliest examples of research into lithium-ion batteries is a CuF_2/Li battery developed by NASA in 1965. The breakthrough that produced the earliest form of the modern Li-ion battery was made by British chemist M. Stanley Whittingham in 1974, who first used titanium disulfide (TiS_2) as a cathode material, which has a layered structure that can take in lithium ions without significant changes to its crystal structure. Exxon tried to commercialize this battery in the late 1970s, but found the synthesis ex...
