J.P. Morgan's recent analysis shows that shipments of stationary energy storage batteries will rise by 50% in 2025 and 43% in 2026. This surge is ...

Global demand for energy storage is surging. Lithium-ion leads today, but new contenders like sodium-ion, flow, and gravity systems are ...

Under the Department of Energy Office of Manufacturing and Energy Supply Chains (MESC) Battery Materials Processing and Manufacturing Grants Program, DOE has committed approximately \$5 ...

Due to increases in demand for electric vehicles (EVs), renewable energies, and a wide range of consumer goods, the demand for energy storage batteries has increased considerably from ...

According to InfoLink's global lithium-ion battery supply chain database, energy storage cell shipment reached 114.5 GWh in the first half of 2024, of which 101.9 GWh going to utility-scale ...

As China hits 1.36 billion kW of new energy storage capacity, the race between lithium-based and flow battery technologies intensifies. Which path will dominate long-duration storage?

By bridging the gap between academic research and real-world implementation, this review underscores the critical role of lithium-ion batteries in achieving decarbonization, integrating ...

The global market for Lithium-ion batteries is expanding rapidly. We take a closer look at new value chain solutions that can help meet the growing ...

A boom in battery storage has bolstered the demand outlook for lithium in 2026, driving hopes for an accelerated turnaround for an industry ...
