-----

The lab-scale, near-white heterojunction solar cell uses nanoclay-based scattering layers combined with dielectric multilayer films to preserve power conversion efficiency while enhancing ...

Solar-collecting windows could make office buildings and skyscrapers more energy efficient, but harnessing solar power while retaining ...

The quest for sustainable energy solutions has taken a transparent turn, quite literally. Scientists at Nanjing University in China have developed a ...

In a new study, led by a research team at Nanjing University, scientists have created a transparent solar coating that turns ordinary windows into solar panels.

Scientists at Nanjing University have developed a transparent, colorless solar coating that can be directly applied to glass. This converts ...

Chinese scientists develop self-healing solar glass that can generate electricity while remaining transparent.

Scientists in China have developed a new way of harvesting solar power by applying a translucent coating over a window to direct energy from ...

Scientists have created a transparent solar coating that turns ordinary windows into clean energy generators without affecting clarity. Using cholesteric ...

Scientists have developed a brand new, clear coating that can be applied to any standard window to turn it into an effective solar panel - while still ...
