In the present study, the soil temperature data obtained continuously at different depths and at different times of the day from the two sites, from October 2012 to September 2013, were analyzed to reveal ...

The nighttime air temperature at height of 2 m in four seasons in the solar farm are higher than that in the region without PV arrays since the solar panels have heat preservation effect near the ground.

The paper comprehensively reviews the latest developments in PV panel temperature management and cooling methods, offering an in-depth discussion of alternative PV panel cooling ...

In this study, we investigated the effects of PV panels on soil moisture and temperature via a whole-year field experiment at a PV power plant in a desert area in western China.

A study of electricity production conducted over an 18-month period following commissioning of Golmud 1 in September 2013 showed performance at both units stabilizing within about 10% of expectations relative to measured DNI. The authors' data over the final 12-month period is reproduced from their graphs in the tables below, and also shows production when including their suggested 0-15% correction for system optimization activities during the first several months of operation. This result extrapolates t...

Three monitoring stations were set up in the PV power plant, transition, and reference areas, and the influence of large-scale PV ...

To investigate the effects of a typical solar park on the Gobi ecological system, local microclimate and soil thermal regimes were measured year-round under and between PV arrays, at ...

Understanding and calculating PV cell temperature is crucial for optimizing the design and performance of
