Wind power capacity touched 520 GW, the administration said, up 18% from a year earlier.

China is the largest producer of wind power in the world, having ...

China's total wind generation capacity is 561 GW, which is more than three times more than the United States who comes in second behind China, ...

Under the guidance of the central government, the PRC has become not only the largest producer of wind power and wind power equipment, ...

A full 16% of all electric generation in China comes from wind, as shown in the EIA chart below. The U.S. International Information Administration ...

Between January and May, China added 198 GW of solar and 46 GW of wind, enough to generate as much electricity as Indonesia or Turkey.

China's installed wind power generation capacity has consistently ranked first in the world for an impressive 15-year streak, according to the latest data released by the China Electricity ...

China's installed wind capacity in the 570-580 GW range represents the nameplate capacity of turbines; actual yearly electricity produced depends on wind resources, curtailment and ...

Areas with great wind power potential such as Gansu are sometimes far away from established industrial and residential centers. Coal-fired plants have a constituency of miners and local governments which wind-power projects lack. This has led to power generated by wind remaining underused. Transmission capacity of the grid hasn't kept up with the growth of China's wind farms. In 2009, only 72% (8.94 GW) of China's total wind power capacity was connected to the grid. In 2014, 96.37 GW of ...
