Dual-glass type modules (also called double glass or glass-glass) are made up of two glass surfaces, on the front and on the rear with a thickness of 2.0 mm each.

The Tilt Systems are quick and easy to install, allowing solar panels to be installed in the angle ranges from 10 to 15 degrees, 15 to 30 de-grees and 30 to 60 degrees.

Double glass solar panels with advanced PERC technology, half-cell and frameless design enable lower degradation, high power and longer life.

In recent years, with the rapid development of the photovoltaic industry, double glass module as a high reliability and high weather resistance product is favored by many PV manufacturers.

Excellent Anti-PID performance guarantee via optimized mass-production process and materials control. Module power increases 5-25% generally, bringing significantly lower LCOE and higher IRR. The N ...

To add a bit of complexity in purchase choices for solar panel buyers, there can be a toss-up between single and double/dual glass panels. So, which is better? ...

It provides smart PV solutions for residential, commercial, industrial, utility scale, energy storage systems, and microgrids. It builds a product ecosystem centered on solar inverters, charge ...

Compared to traditional glass-backsheet modules, they offer greater durability and environmental resistance. The dual-glass structure provides ...

Double-glass modules boast increased reliability, especially for utility scale PV projects. These include better resistance to higher temperatures, humidity and ...
