ABB offers a full spectrum of communication systems for onshore and offshore installations - fixed and floating, topside and subsea. Our integrated solutions are based on the best equipment available, ...

We help you choose the right cabinet based on your equipment dimensions, cooling needs, power requirements, and future scalability. If you're unsure, our team is ...

The utility model relates to an electrical control field especially relates to an oil field intelligent data acquisition switch board.

In the Digital Oilfield, smart elements such as sensors, measuring devices, and actuators embedded in drills or wellheads exchange data in real time, so they can be monitored, integrated, configured, ...

Research results provide technical support for fault-free oil and gas production, and promote the digital transformation of the conventional energy industry and the implementation of ...

Fig. 2 shows essential tools and enablers of a smart field in a typical ADCO oil field, with one central degassing station (CDS) and several remote degassing stations (RDSs).

Our communication portfolio provides transparent connectivity from the gas chromatographs, e.g. MAXUM, up to the Analyzer System Manager (ASM) for the monitoring of measurement quality and ...

This study outlines the key criteria in the success of smart oilfield applications in a given field that will serve for the future decisions as a comprehensive and collective review of all the ...

Backbone cabling (copper and fiber) from the applicable communication room(s) is installed, tested, labeled, and approved by the inspector and communications design consultant.
