In summary, purchasing solar panels for your home sooner rather than later is in your best interest as a homeowner. You can begin ...

The only way to determine whether you should invest in a rooftop solar array now, or wait until later, is to step back and take a long, hard look at your situation as a homeowner.

Before any solar installation, a roof inspection is key. If your roof has fewer than 10 years of life left, we recommend replacing it first. Why? Because removing and reinstalling ...

The best time to install solar panels is during roof replacement or when your roof has at least 10-15 years of life left. This ensures long-term savings and fewer future issues.

If your home is well-suited for a solar panel installation and you qualify for incentives now to help offset the cost, it is typically better to install a new solar energy system ...

How solar panels are improving, whether you should wait to install solar panels, and the best time to install solar panels.

Discover the best order for roof replacement and solar installation. Learn how timing impacts costs and efficiency for your home.

Basically, don't throw panels on top of something you're going to need to fix or replace in a few years. Understand your energy use, and then oversize ...

No, solar panels don't start working immediately after installation. The process of generating power from solar panels includes ...
