Sun-tracking PV arrays hover three meters above Japanese rice fields. Japan may have found a way to harvest renewable electricity without ...

TOKYO -- Japanese oil company Idemitsu Kosan on Thursday unveiled a solar farm it built at a rice paddy in southern Japan, highlighting cropland as a potential key to reaching the...

With Japan aiming to dramatically increase its solar capacity by 2030, the researchers hope their results will inform broader adoption of ...

As for solar power generation, the number of suitable sites for installing large-scale power plants is decreasing, which is one of the challenges for expanding renewable energy in Japan. Agricultural ...

Japan's green spaces outside of urban areas are covered with solar panels. The number of mega solar plants in Japan is increasing. Yet, it can be ...

In Japan, the bottleneck for developing mega-solar PV plants is securing the land. Developers have therefore been eyeing the agrivoltaic market ...

Japan's national ambitions to drastically expand its solar energy capacity by 2030 make this agrivoltaic model particularly timely. As the country grapples with limited land resources, ...

By Claire Poole In June 2025, Japanese football team, Mito Hollyhock, launched an innovative solar-sharing project in Shirosato-cho, Ibaraki Prefecture, combining renewable energy generation with ...

This study explores the integration of solar energy generation with rice farming through a practice known as agrivoltaics, addressing the critical ...
