This paper presented an extensive review of microgrid control functions, with a specific focus on energy management, protection, resiliency, ancillary services, and data management.

We apply feedback-based control algorithms to each microgrid state-specific optimization problem, which generalizes the microgrid's EMS.

Overall, the simulation results confirm the effectiveness of the proposed microgrid control and management system. The combined ANN-based MPPT strategy and optimized energy ...

NL microgrid controller are focusing on more distributed control architecture. A service-oriented architecture for microgrid control and operation is currently under development to allow plug-and-play ...

The results of the survey are presented in this report with the current status of commercial microgrid controllers analyzed, potential research gaps identified, and future research trends revealed.

The Guidehouse Insights leaderboard report evaluates microgrid control vendors on 12 metrics--including islanding ability, controls functionality, pricing, geographic ...

Abstract Microgrids (MGs) technologies, with their advanced control techniques and real-time monitoring systems, provide users with attractive benefits including enhanced power quality, stability, ...

NLR develops and evaluates microgrid controls at multiple time scales. Our researchers evaluate in-house-developed controls and partner-developed microgrid components using software ...

While DOE has made significant progress in supporting microgrid deployments, there remain research gaps for both remote microgrid, and microgrids for critical infrastructure, which are being addressed ...

Microgrid Control and Management Results Report
