By combining advanced scheduling strategies with accurate degradation modeling and multi-agent coordination, the proposed system ...

To enhance the solution efficiency of the scheduling strategy for the distribution network-microgrid cluster and achieve the minimization of total operational costs, this paper develops a ...

The purpose of this paper is to review the progress of intelligent optimal scheduling in new microgrids, and to discuss the technical challenges in multi-energy integration, real-time optimization, ...

To derive a balance for the mismatched demand response and energy supply, a three level hierarchical coordination strategy is proposed. The top level is responsible for energy coordination between the ...

This paper proposes a cooperative hierarchical scheduling optimization model of interconnected multi-microgrid and an active distribution ...

This paper proposes a hierarchical optimization method for the energy scheduling of multiple microgrids (MMGs) in the distribution network of power grids. An energy market operator ...

To improve the automation level of distributed generation, a hierarchical optimisation strategy is proposed in this study. The strategy consists ...

To maximize the utilization of DGs and the mutual balance of MGs, a hierarchical optimal scheduling scheme is developed for MGs in distribution networks (DNs) under ER control.

To tackle the energy management problem of a MMG system, which consists of multiple renewable energy microgrids belonging to different operating entities, this paper proposes a MMG ...
