This paper focuses on optimizing renewable energy sources within a standalone microgrid using particle swarm optimization (PSO) as ...

This paper introduces an innovative Active and Reactive Energy Management System (AR-EMS) tailored for optimizing power flow within a Moroccan smart microgrid.

This paper focuses on optimizing renewable energy sources within a standalone microgrid using particle swarm optimization (PSO) as the sole ...

In this study, the techno-economic feasibility of an energy storage system for an autonomous microgrid based on solar and wind energy in the southern region of Morocco is evaluated.

As of August 2025, MG-FARM has entered its consolidation phase with five (!) pilot systems operational in both Algeria and Morocco: The UDES-CDER site in El Hamdania now features ...

The goal of the project is to analyze the challenges that microgrids, based on mainly renewable energy combined with battery systems, are facing in rural Morocco and to stimulate their uptake.

This research proposed a techno-economic optimization framework for the optimal design and operation of interconnected AC microgrids to improve energy access in rural areas.

2 Morocco's Rural Electrification Rate (RER) had reached 99.72% at the end of 2019, with a total population, having benefited from access to electricity under PERG, estimated at 12.8 million ...

However, rural Moroccan communities remain disadvantaged and dependent on fossil fuels. This study aims to address this gap by combining geospatial data analysis with ...
