---

This overview examines key logistical factors for transporting major battery technologies, including lead-acid, lithium-ion, nickel-cadmium, nickel ...

Choose from our selection of nickel cadmium (niCad) batteries, including batteries, button/coin cell batteries, and more. Same and Next Day Delivery.

Saft operates the only plant in the world that produces nickel-cadmium batteries incorporating metals that have been reclaimed on site from spent batteries, reducing their eco-footprint.

Place the damaged battery in a sturdy, leak-proof container specifically designed for battery transport. Label the container as "Damaged Nicad Battery" to ensure proper handling during ...

They are not rechargeable, but they do have a longer life than standard alkaline batteries/cells, making them ideal power sources for devices ...

Rechargeable (secondary) batteries are electrochemical storage cells that function on the basis of a reversible chemical reaction, allowing depleted cells to be replenished and reused numerous times ...

At a temperature of 55°C (131°F), the battery must not contain any unabsorbed free-flowing liquid, and must be designed so that electrolyte will not flow from a ruptured or cracked case.

NiCd batteries contain cadmium, a toxic heavy metal that poses risks to both human health and the environment. Improper disposal can lead to soil and water contamination.
