Norwegian companies are also playing a significant role in building offshore wind farms in the US and the UK, further cementing Norway's position as a leader in the green energy transition.

This article explores the latest trends, challenges, and opportunities in Norway's green energy sector, offering actionable insights for developers, investors, and stakeholders.

In the following pilot study, we investigate the persuasive influence of narrative messaging on both supportive and oppositional stakeholders in a land-based wind power licensing ...

In sections four and five, I use the cases of carbon capture and storage (CCS) and offshore wind power (OWP) in Norway to analyse policy network formation and policy change.

With 98% of its electricity already sourced from hydropower, the country now focuses on advanced storage solutions to balance seasonal demand and harness wind/solar potential. But what makes its ...

More than 75% of Norwegian hydropower production is rendered flexible through the use of reservoirs, which represents half of Europe's total reservoir storage capacity. This is a perfect counterbalance to ...

By 2030, the specific target is an increase in renewable power production of at least 40 TWh, and at least 20 TWh saved through energy efficiency. To achieve this target, the government ...

The Government will submit a proposal to the Storting in the course of spring 2022 for amendments to the Offshore Energy Act and the appurtenant regulations. The Government plans to ...

Wind power is the only solution to Norway's future energy needs. Norway will fall into an electricity deficit due to delays in building out wind power, according to DNV's Energy Transition ...
