Using a case study of a Handysize bulk carrier selected for this study, it was found out that adopting these renewable energy technologies on board this ship reduced GHG emission by 35.52%.

A PV system has gone into operation on a new cargo ship developed by HGK Shipping and Salzgitter AG, supplying power directly to the vessel's ...

Studies have shown many materials have the bulk photovoltaic effect, however, the inner properties such as carrier mobility, relaxation time, etc., have been barely reported, largely hindering

This case study explores a 100 kWp solar PV system installed on the hatch covers of a handymax bulk carrier. Operating primarily in Northern Europe, the system ...

When coupled with other sources of energy such as PV panels the benefits are enhanced. It will address the marine sector's major challenges to ...

Dutch company Wattlab has signed a contract to outfit the hatches of Berge Rederi's "BRF Froan" with an onboard solar energy system producing 172,8 kWp, twice the power of Wattlab's ...

The solution incorporates rigid sails, solar panels, batteries, optimised weather-routing, and a smart decision support system developed by Hydrographic and ...

Eco Marine Power's latest solar trial on a bulk carrier isn't just another green tech test--it's a live lab for the maritime industry's clean energy ...

The equipment installed on the ship so far includes a class-approved hybrid battery pack, battery charging equipment, flexible marine-grade ...
