The IEA PVPS Trends in Photovoltaic Applications 2025 report provides comprehensive data and analysis on global PV deployment, technology, and ...

Hence, this study proposes the Extreme Gradient Boosting regression-based Solar Photovoltaic Power Generation Prediction (XGB-SPPGP) model to predict and classify the usage of ...

NLR develops data and tools for modeling and analyzing photovoltaic (PV) technologies. View all of NLR's solar-related data and tools, including more PV-related resources, or a selected list ...

Generated power of a solar panel is volatile and susceptible to environmental conditions. In this study, we have analyzed variables affecting the generated power.

The purpose of the current study was to utilize data analytics to develop a reliable model for producing deterministic and probabilistic PV power generation predictions for Bui solar power ...

Solar power generation and sensor data for two power plants. This data has been gathered at two solar power plants in India over a 34 day period. It has two pairs ...

The dataset comprises measured PV power generation data and corresponding on-site weather data gathered from 60 grid-connected rooftop PV ...

This dataset comprises power generation data from the inverter level, including individual inverters connected to several solar panel strings and sensor data from sensors placed at the plant ...

This study presents a comprehensive evaluation of solar power forecasting methods developed between 2021 and 2025, a period marked by the rapid advancement in artificial ...
