-----

We applied document analysis and semi-structured interview methods to study the role of solar energy for carbon neutrality in this area.

This paper aims to support the climate goals of Helsinki by analysing the energy and emission impacts of local renewable energy solutions including seasonal heat storages in a ...

The data contains the photovoltaic production potential calculated per building, provided that the entire area suitable for solar panels is covered with solar panels.

The aim of this study is to assess the potential of large-scale utilization of solar panels on the roofs of Helsinki, Finland. First, a literature review is conducted on the topics of solar power and spatial ...

Imagine a city where wind turbines and solar panels power 80% of homes even when the sun isn't shining or the wind isn't blowing. That's exactly what Helsinki's new energy storage initiative aims to ...

This paper outlines how current state of solar energy utilization can be improved in public and private buildings and utility companies in the Helsinki Metropolitan area in terms of costs and financial ...

Environmental reporting and environmental indicators are also developed by the six largest cities of Finland (Helsinki, Espoo, Vantaa, Turku, Tampere and Oulu) in cooperation.

Very strict and binding energy efficiency requirements have been set for the City's own building stock in both new constructions and renovations. In ...

In 2023 FCG completed a preliminary study for Helsinki Region Environmental Services (HSY) on establishing a solar power plant at the eco-industrial centre. We assessed potential land ...
