-----

Massive levels of imports, driven by Chinese overproduction of solar modules and components and exports worldwide, has put the U.S. manufacturing industry in crisis.

A new countervailing duty by the US on Indian solar modules are reshaping trade patterns. India's renewable energy ministry sees Africa as a strong alternative for both module exports and for ...

Indian solar manufacturers face major challenges as new Donald Trump tariff proposals threaten to disrupt record exports and clean energy supply chains.

Tariffs are falling, making Indian solar modules and cells more competitive. Companies are now planning to export higher-value items like battery storage systems and inverters. This move ...

The cell number is important because it signals that domestic solar panel manufacturers are ramping up production, and perhaps the majority of installed solar panels in the United States will ...

Since the end of 2024, SEIA estimates that U.S. solar cell production capacity has more than tripled, rising from 1 GW to 3.2 GW. In addition to the ...

Solar PV products are a significant export for China. In 2021, the value of China's solar PV exports was over USD 30 billion, almost 7% of China's trade surplus over the last five years.

As the energy crisis fueled by Russia's invasion of Ukraine has subsided, demand for residential solar systems in the EU has declined and several residential solar incentive schemes ...

This special report examines solar PV supply chains from raw materials all the way to the finished product, spanning the five main segments of the manufacturing process: polysilicon, ingots, wafers, ...
