-----

Our flagship programme, Zephyr, is a high-altitude pseudo-satellite that is powered exclusively by solar power. Known as a high-altitude platform station (HAPS), it ...

The aircraft is a single-seated monoplane powered by photovoltaic cells; it is capable of taking off under its own power. The prototype, often referred to as ...

The vacuum process is scalable and solvent free, yet all-vacuum-deposited perovskite solar cells still trail solution-processed counterparts. Facet-directed co-evaporation yields (100) ...

We decided to work on the underlying techniques and technologies needed to ...

The breakthrough comes from Johannes Kepler University in Linz, where scientists are developing solar cells that are extremely thin--20 times ...

In the context of aviation, solar energy can be harnessed using photovoltaic cells, commonly known as solar panels, which convert sunlight into ...

Skydweller Aero aims to produce the world's first commercially viable &quot;pseudo-satellite&quot; -- a solar-powered airplane ...

Tiny crystal "seeds" could solve a hidden flaw in perovskite solar cells--unlocking high efficiency at larger scales.

Solar energy continues to evolve rapidly, with innovations enhancing efficiency and scalability. At the heart of these advancements lies the solar cell back plane--a crucial component ...
