Most of the current attention is focused on solar geoengineering, a strategy that involves reflecting sunlight away from Earth to cool the Earth. How ...

Imagine a device that can sit outside under blazing sunlight on a clear day, and without using any power cool things down by more than 23 degrees Fahrenheit (13 degrees Celsius). It ...

Off-grid solar systems, as standalone solar systems that operate independently without grid connection, can continuously provide clean, safe, ...

This zero-energy technology may soon replace conventional cooling technologies, offering an alternative that requires only water to function.

The Sun uses this method to emit its energy out into the solar system, and it is the least efficient means of heat transfer by far. Consequently, ...

Recently, researchers have been exploring how to turbo charge a passive cooling technique -- known as radiative or sky cooling -- with sun ...
