The base transceiver station, or BTS, contains the equipment for transmitting and receiving radio signals (transceivers), antennas, and equipment for encrypting and decrypting communications with the base station controller (BSC). Typically a BTS for anything other than a picocell will have several transceivers (TRXs) which allow it to serve several different frequencies and different sectors of the cell (in the case of sect...

The Forum Mobil association information platform provides community and canton authorities with detailed information on network expansion, base station site evaluation and legal conditions.

This paper proposes an antenna solution for direct air-to-ground (ATG) communications, particularly focusing

Swiss communication signal base station

on the challenges and potential of the digital airspace vision.
