Our facilities provide required testing to safety standards to help you meet over 40 global certifications, and the critical performance data you're looking for to ...

Our geotechnical and exploration services testing for solar projects provide clear on-site subsurface conditions and pile performance data for the designed pile ...

This recommended practice provides test methods and procedures for assessing the performance of stand-alone PV systems that include PV modules, charge controller, batteries, and ...

This report provides field procedures for testing PV arrays for ground faults, and for implementing high-resolution ground fault and arc fault detectors in existing and new PV system designs.

Steel Piles in Solar Projects - Load Testing (ASTM vs Practical Adjustments) In utility-scale solar farms, steel piles serve as the structural base for PV modules, trackers, fences, and...

These tests focus on verifying the stability and load-bearing capacity of panel anchoring in the field, which is essential to ensure resistance to wind, snow loads, and other natural elements.

This recommended practice provides test methods and procedures for assessing the performance of stand-alone PV systems that include PV modules, charge controller, batteries, and loads.

It is recommended to perform a test by driven pile, either the lateral load test, or an axial load test, trying to achieve in each case the ultimate ground strength, the maximum load of the load device, or the ...

DNV is accredited as a testing laboratory under ISO 17025 by ENAC. We have been carrying out tests under a multitude of international standards in the ...
