By displacing fossil fuel-based power generation, wind turbines help reduce air pollution associated with burning coal, oil, and natural gas. However, ...

In 2019, an image from Casper Regional Landfill in Wyoming showing piles of long, white blades waiting to be buried went viral, prompting ...

But if a wind turbine blade scatters a witches' brew of industrial chemicals and environmental pollutants when it falls apart, that's nothing compared to when it keeps spinning.

We explore the structural composition of wind turbine blades, the environmental and economic implications of their disposal, and the potential for energy recovery and waste management.

While wind energy is marketed as the future's green energy ...

Contamination of waterways, soil profiles and the waste management arising from wind turbine blades containing high levels of BPA is recognized worldwide as a "ticking time-bomb".

The maintenance and repair of wind turbine blades include grinding and joining parts and can lead to emission of plastic particles, which (for the case of offshore wind turbines) can also be ...

We have documented the threats of industrial wind turbines to both soil and water in their pre and post-construction phases, not to mention birds, bats, insects, and humans. But not enough ...

Even before they hit the dump, wind turbine blades are shedding their toxic plastic residues far and wide. That the plastics in the blades are toxic is ...
