With transmission lines at overcapacity and permitting delays ...

Located in the Atacama Desert in northern Chile, this megaproject will have a total capacity of 2 GW of photovoltaic generation and 11 GWh of lithium-ion battery storage, distributed ...

Chile's unique geography presents a challenge to the country's transmission grid which is often constrained in its ability to supply energy from ...

Chile has emerged as a world leader in hybrid systems and standalone energy storage since implementing its Renewable Energy Storage and Electromobility Act in 2022.

Chile has reached fresh milestones in its energy transition amid a rapid build-out of solar and battery storage infrastructure. The context: The ...

Improved data for determining peak hours: Modifications have been made to improve the availability of relevant data and studies that help accurately identify the peak hours that determine ...

Chile's data-centre growth is real, quantifiable and poised to rise sharply - driven by hyperscaler regions, large domestic campus projects and improved subsea connectivity.

Battery storage systems can capitalize on this arbitrage opportunity and help reduce the financial impact of curtailment in hybrid solar power plants until large transmission line projects ...

A key innovation in the 2026 proposal is the formal inclusion of battery energy storage systems (BESS) as a transmission solution. In the Alto ...
