In 2019, changes were announced to the Ukrainian energy market operations that have significant impacts on the growth and operation of large scale solar facilities in Ukraine.

Solar power is driving Ukraine's energy resilience and decentralization amid wartime challenges. With 800 MW of new solar capacity added in 2024 and a growing pipeline of municipal ...

The SEAU said it expects to see an increase in distributed generation over the next year, in particular as businesses seek energy security ...

Find out the estimated cost of a solar power station and the expected payback period - all in a convenient format in a few clicks.

The report analyses how to accelerate the deployment of distributed solar photovoltaic systems in Ukraine to strengthen energy security and advance decarbonisation.

In December, the International Energy Agency published a report covering three strategies for accelerating deployment of distributed solar-plus-BESS in Ukraine.

In 2025, SOLARsk delivered over 220 MW of solar power plants in Ukraine as an EPC contractor. Utility-scale and rooftop PV projects with full-cycle engineering and construction.

Wind farms and solar projects are already changing how Ukraine generates electricity. This guide explores eight groundbreaking renewable energy projects across Ukraine. You'll discover how solar ...

In Ukraine, the generation of solar energy strongly depends on the time of year, with the most favorable months for generating electricity being June, July, and August due to the longest daylight hours.
