"Just like a city microgrid integrates a variety of local, renewable ...

Nano engineers created a prototype of a wearable microgrid that harvests and stores energy from the human body that can power small electronics.

"Just like a city microgrid integrates a variety of local, renewable power sources like wind and solar, a wearable microgrid integrates devices that locally harvest ...

Integrated energy-autonomous wearable microgrids offer a compelling solution to support the growing power demands of long-term health care and wellness monitoring.

This Perspective discusses the vision of a wearable microgrid, based on a judicious scenario-specific selection of harvesting and storage modules, with ...

By allowing individuals to generate and store their own energy, wearable microgrids help reduce reliance on traditional energy sources, significantly lowering carbon footprints.

Inspired by this notion, we herein propose and demonstrate the concept of a wearable e-textile microgrid system: a multi-module, textile-base system with applications powered by complementary and ...

Here, we report an autonomous and continuous sweat sensing system that operates on a fingertip. The system uses a self-voltage-regulated ...

In this blog, we'll explore how the body can fuel wearables, the science behind human-powered microgrids, and what this means for the future ...
