Utility-scale PV led global installations, but distributed PV remained strong in key markets including Germany, Türkiye, and Brazil. Curtailment is increasingly ...

For solar PV, wind and bioenergy for power, deployment has been revised downwards. Solar PV accounts for over 70% of the absolute reduction, mainly ...

In the first half of 2024, the United States produced 4.2 GW of PV modules--an increase of 75%, y/y--roughly evenly split between thin-film and ...

Global solar photovoltaic capacity has grown from around 40 gigawatts in 2010 to approximately 2.2 terawatts in 2024. Only in that last year, ...

In 2024, the growth in electricity generation from solar PV alone surpassed that of all other renewable energy (RE) technologies combined. This is despite a substantial rebound in ...

Utility-scale solar (including PV and CSP technologies) and C& I PV electricity production dropped by 46% from its summer peak (July 2024) to its winter low (December 2024), and ...

It examines the current state of solar power and related academic solar energy research in different countries, aiming to provide valuable guidance for researchers, designers, and policymakers ...

Photovoltaic (PV) solar accounted for 58% of all new electricity-generating capacity additions through the third quarter of 2025, remaining the dominant form of new electricity-generating ...

This dataset contains yearly electricity generation, capacity, emissions, imports and demand data for European countries. You can find more ...
