The PV service fused disconnect, sometimes called the fusible AC disconnect, is most commonly used when your solar array has a single large ...

Busbars and fingers If you look closely at the face of a solar panel, you'll see a grid of metallic lines. The thinnest lines are called fingers, and their ...

The front glass is positioned on the outermost side of the module and represents the first structural interface through which light enters the solar panel. ...

Those lines are called the grid lines, and they're actually doing some serious work to light your house and keep you cool during the summer. The grid ...

This part of the solar power plant system connects the battery that stores the power from the solar panels to your home or business using the power. It's the bridge between the system's ...

Unless the solar farm is right next to a transmission line or substation, a dedicated transmission line called a generation tie ("gen-tie") will need to be built.

Inverters are the brains of a solar power system. They are responsible for converting DC power (from your panels) into AC power (the format that is usable ...

A photovoltaic system, also called a PV system or solar power system, is an electric power system designed to supply usable solar power by means of photovoltaics.

Busbars, typically made of aluminum or silver-plated copper, run perpendicular to the fingers. They separate solar cells within the photovoltaic module and ...
