Mining the Sun, a report by The Nature Conservancy, suggests that siting clean energy infrastructure on degraded lands like mining sites, landfills ...

EPA and NREL created this document to provide assistance in addressing common technical challenges for siting solar photovoltaic (PV) on municipal solid waste (MSW) landfills. This ...

Reclaimed mine lands present a valuable opportunity for deploying photovoltaic (PV) systems, offering both environmental and economic benefits while addressing challenges of land reuse.

Mount Olive has been touted by the solar power industry for the redevelopment process, along with the design and construction execution, used ...

panels should be considered in slope stability analyses. Another item to consider during the siting and construction is the potential for gas migration and therefore the

Examples of brownfields include landfills at capacity, abandoned mines, and former industrial sites. While brownfields might not be appropriate for housing ...

space available for construction. Most brownfields in Maryland are parcels under one (1) acre in size. Solar energy production on a site is linearly proportional to the number of panels in an ...

While not every identified disturbed and contaminated site will be suitable for solar energy development, these lands offer a starting point for siting projects in locations that could minimize environmental ...

PV solar array designs that need foundation or ancillary equipment (cables, boxes, etc.) penetration into the existing cap surface layers are not encouraged but may be considered with the ...
